

Logout

Objectives:

- The user will also be able to logout from a logged in state.
- Send logouts to be logged.

Background:

Logging out is an essential component of most web apps, this will allow users to logout for security purposes and protect potentially sensitive information, a login must have a logout to compliment it.

Requirements:

- Users will be able to logout.
- Log all logouts.

Success: User is unable to logout

Failure: User is unable to login, given the proper credentials.

4.10.1 Functional

Req#	Priority	Description	Rationale
General / Base Functionality			
FR- LO- G-001		User must be able to log out
